

The following data has been processed from **October 1 2023** to **December 31 2023**.

### **Information Requests**

Between October 1 2023 and December 31 2023 , there were 3 inquiries or requests from law enforcement agencies.

### **Our Response**

Our response to all requests for personal information of users explained that Session abided by privacy-by-design principles to protect human rights defenders, journalists, whistleblowers and other at-risk communities that require maximum privacy. The content of messages are end-to-end encrypted and communicated through a decentralised onion-routed network, which means that there is no way for the Session team to discover the content of a message or the IP or other personal identification information of users sending or receiving messages. Therefore, we cannot provide information that could help LEAs identify a user.
